Date	F	Referring Neurologist's Name and Addre	ess
Participant Demographic Data		Sex	
Date of Birth			
Age in years of first symptom of Lafora diseas	se		
What was the first symptom?			
Prescreening Inclusion Criteria			Check if true
Genetically confirmed diagnosis of Lafora dispathogenic mutations in known causative ge <i>EPM2B/NHLRC1</i> /malin). Copy of genetic tesmust be provided.	nes ((EPM2A/laforin,	
Must have Lafora Disease Performance Scale subscore of ≥ 2 . LDPS score sheet, below, comust be provided.	-	•	
Must be able to walk independently, unassisted and with no ambulatory aids such as crutches of canes. A video showing the patient walking 10 steps independently must be provided. The video must be from the chest down. Patient's face must not be seen. Any video with the face visible will not be accepted and immediately deleted.			

Lafora Disease Clinical Performance Scale

[Bolden the correct score for each domain and provide the total score below] Domain 1: Generalized tonic-clonic seizures 3	Scale (0-18) Score
Domain 1: Generalized tonic-clonic seizures None 3 Less than monthly (sporadic) 2 More than monthly but less than daily (frequent) 1 Daily or status epilepticus (constant or near constant) 0 Domain 2: Myoclonus Absent 3 Mild (patient can eat and drink, but not write or draw) 1 Severe (patient cannot eat or drink) 1 Severe (continuous myoclonus at rest) 0 Domain 3: Ambulation 1 Independent ambulation 3 Able to ambulate independently but gait clearly abnormal 2 Unable to ambulate without assistance 1 Unable to ambulate without assistance 1 Unable to ambulate independently but gait clearly abnormal 2 Unable to ambulate independently but gait clearly abnormal 2 Unable to ambulate independently but gait clearly abnormal 2 Unable to ambulate independently but gait clearly abnormal 3 Mild impairment: student requires special help at school or placement in an alternative learning environment 5 Severe impairment: student requires special help at school or placement in an alternative learning environment 5 Severe impairment; patient no longer able to attend school 0 Domain 5: Speech	omain and provide the total score below]
None Less than monthly (sporadic) 2 More than monthly but less than daily (frequent) 1 Daily or status epilepticus (constant or near constant) 0 Domain 2: Myoclonus 3 Mild (patient can eat and drink, but not write or draw) 2 Moderate (patient cannot eat or drink) 1 Severe (continuous myoclonus at rest) 0 Domain 3: Ambulation 1 Independent ambulation 3 Able to ambulate independently but gait clearly abnormal 2 Unable to ambulate without assistance 1 Unable to ambulate without assistance 1 Unable to ambulate without assistance 1 Unable to ambulate independently but gait clearly abnormal 2 Unable to ambulate without assistance 3 Mild impairment; decline at school performance) 3 Moderate impairment: student requires special help at school or placement in an alternative learning environment 2 Domain 5: Speech 2 Normal 3 Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech 0 Domain 6: Function 1 Normal (preserved Activities of Daily Living [ADLs] listed below) 3 Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	•
Less than monthly (sporadic) More than monthly but less than daily (frequent) Daily or status epilepticus (constant or near constant) Domain 2: Myoclonus Absent Absent Mild (patient can eat and drink, but not write or draw) Severe (patient cannot eat or drink) Domain 3: Ambulation Independent ambulation Independent ambulate independently but gait clearly abnormal Unable to ambulate without assistance 1 Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) 3 Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	eizures
More than monthly but less than daily (frequent) Daily or status epilepticus (constant or near constant) Domain 2: Myoclonus Absent 3 Mild (patient can eat and drink, but not write or draw) Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance 1 Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Zomaire impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Zomain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	3
Daily or status epilepticus (constant or near constant) Domain 2: Myoclonus Absent Absent Mild (patient can eat and drink, but not write or draw) Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Independent ambulate independently but gait clearly abnormal Unable to ambulate without assistance 1 Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Zomoderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Severe impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) 3 Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	2
Domain 2: Myoclonus Absent Alid (patient can eat and drink, but not write or draw) 2 Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Independent ambulate independently but gait clearly abnormal Unable to ambulate without assistance 1 Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance No decline in school performance as Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) 3 Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	y (frequent) 1
Absent Mild (patient can eat and drink, but not write or draw) Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	or near constant) 0
Absent Mild (patient can eat and drink, but not write or draw) Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	
Mild (patient can eat and drink, but not write or draw) Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	3
Moderate (patient cannot eat or drink) Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent	
Severe (continuous myoclonus at rest) Domain 3: Ambulation Independent ambulation Able to ambulate independently but gait clearly abnormal 2 Unable to ambulate without assistance 1 Unable to ambulate Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance 3 Mild impairment; decline at school, but still in school 2 Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Normal 3 Mild impairment: deminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Independent ambulation Able to ambulate independently but gait clearly abnormal Unable to ambulate without assistance Unable to ambulate Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Able to ambulate independently but gait clearly abnormal 2 Unable to ambulate without assistance 1 Unable to ambulate	2
Unable to ambulate without assistance 0 Unable to ambulate 0 Domain 4: Cognition (from school performance) No decline in school performance 3 Mild impairment; decline at school, but still in school 2 Moderate impairment: student requires special help at school or placement in an alternative learning environment 1 Severe impairment; patient no longer able to attend school 0 Domain 5: Speech	
Unable to ambulate 0 Domain 4: Cognition (from school performance) No decline in school performance 3 Mild impairment; decline at school, but still in school 2 Moderate impairment: student requires special help at school or placement in an alternative learning environment 5 Severe impairment; patient no longer able to attend school 0 Domain 5: Speech	
Domain 4: Cognition (from school performance) No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
No decline in school performance Mild impairment; decline at school, but still in school Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	erformance)
Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Moderate impairment: student requires special help at school or placement in an alternative learning environment Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	out still in school 2
Severe impairment; patient no longer able to attend school Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	res special help at school or placement in an 1
Domain 5: Speech Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	r able to attend school 0
Normal Mild impairment: hesitates but remains fluent Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Mild impairment: hesitates but remains fluent 2 Moderate impairment: diminished word production, difficult to understand 1 Severe impairment: no speech 0 Domain 6: Function	
Moderate impairment: diminished word production, difficult to understand Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	3
Severe impairment: no speech Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	ins fluent 2
Domain 6: Function Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	ord production, difficult to understand 1
Normal (preserved Activities of Daily Living [ADLs] listed below) Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	0
Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	
Mild impaired: has difficulty in 1 or 2 ADLs but remains independent 2	Living [ADLs] listed below) 3
·	
Moderate impaired: requires assistance in 3 or 4 ADLs	
Severe impaired: requires assistance in all 5 ADLs 0	
Total Score	

Activities of Daily Living: Personal hygiene (bathing, grooming, brushing teeth), Dressing, Toilet hygiene, Ability to transfer (get in and out of bed/chair), and Ability to self-feed.
